IT, the New Way

Up until now, you've relied on either your overwhelmed in-house IT staff or an outsourced IT contractor to come to the rescue, making critical repairs only after one or more of your computers has gone down unexpectedly. It's been that way for years – and you've grown used to the process. The problem is, your IT guys are not always available when you need them most. And once they do show up, they take too long and the price is enormous. It costs your business time and money – two things you really can't afford to lose.

It doesn't have to be that way. Xalogy is a cutting-edge Managed IT Service Provider, focusing on the technical aspects of keeping your business running. With an innovative approach to managing your IT infrastructure, Xalogy stays a step ahead of problems so you can focus on more important tasks. Xalogy keeps you happy, your employees less stressed, and your business more productive.

How Xalogy Does IT

Xalogy has developed a refined process to make IT work better for you. We proactively schedule remote maintenance and updates for all systems after hours, to ensure that system downtime comes at a time convenient for you. We monitor all systems in your business from our Network Operations Center, in real time, to anticipate and prevent security risks or breaches. We ensure that all of your valuable data gets backed up every hour of every day, in case an incident does occur. Our customers find this no-nonsense approach unique, refreshing, and most importantly, effective.

Computers are computers; and issues will still arise. But when that happens, you're no longer on the hook to schedule a service call. Any employee that experiences a problem with a workstation can contact us directly to request help. With some of the brightest Network Security Technicians on staff, we can manage the crisis, and get your employees back up and running in no time. That

leaves you free to deal with more important things – like managing your business.

These days, business success depends on productivity and a solid IT infrastructure. With Xalogy on your team, you will never have to worry about time lost to an unreliable or compromised network. We'll make sure you're running efficiently and effectively 24 hours a day, seven days a week.

No Fuss Flat Rate

How much will this cost? That's the best part! The pricing model at Xalogy is flat-rate based. That means you pay the same amount every month, regardless of how many service calls you or your employees have placed. That makes it easier for you to budget, and it gives you the confidence to know that your network is monitored even when the lights are off.

Another network crisis could be right around the corner. So why wait?
